

JavaScript – 10 Questions and Answers

1. What is JavaScript?

JavaScript is a high-level, interpreted programming language used to create dynamic and interactive web pages.

2. What are JavaScript data types?

Common data types are String, Number, Boolean, Undefined, Null, Object, Symbol, and BigInt.

3. What is the difference between var, let, and const?

var has function scope, let has block scope, and const has block scope and cannot be reassigned.

4. What is an arrow function?

Arrow functions are a shorter syntax for writing functions and do not have their own this context.

5. What is a callback function?

A callback function is a function passed as an argument to another function and executed later.

6. What is the DOM?

DOM stands for Document Object Model. It represents the HTML document as a tree structure.

7. What is event bubbling?

Event bubbling is when an event starts from the target element and propagates up to parent elements.

8. What is a promise?

A promise represents the eventual completion or failure of an asynchronous operation.

9. What is async/await?

async/await is syntax used to handle asynchronous operations in a cleaner and more readable way.

10. What is localStorage?

localStorage is a web storage object that allows saving key-value data in the browser permanently.
